Seahorse Tutorial by Donna

Notes:

1) Tools used: marver, pick, razor tool.

Glass I used in this one was silver beach but its up to you what color you use.

Clear rod to color and clear to use as punties.

2) Prior to step 21.

Heat the nose just a little and use your marver to flatten the tip just a little. Then heat again and use your pick to push up into the center of the flattened nose making a very small hole/poke into the nose. Sorry no pics of this.

3) You can put as much detail into making these as you want by adding to his fins, eyes and cheeks. But since I was making him and photographing him I just did a basic one.

4) Original tutorial post on LE on 5/24/12.
